

HSX 6000 [*Network Relief*]

Porifera [*Sea Sponge*]

*Utilizing it's unique filtering abilities the sea sponge is good for the ocean.
It is not, however, good for your network.*

Let's face it, your network has become a sponge. It soaks up data coming at it from everywhere. Sure, the data gets from one edge of your network to the other but some of that data encounters detours and traffic jams, some reaches its destination early, some late, and some not at all. Hammerhead Systems has the solution. Hammerhead's HSX 6000 Layer 2.5 Aggregation Switch offers the industry's best QoS for differentiating your Business Class services, providing per flow treatment for over one million flows and traffic shaping on flows from 32Kbps to 1Gbps. With next-generation Gigabit Ethernet densities, the most advanced MPLS Pseudowire implementation, and broad support for legacy data, the HSX 6000 accelerates the profitable delivery of a new class of Business Ethernet services at a fraction of the cost and complexity of other solutions. Let Hammerhead show you how to eliminate your network sponge, visit us at www.hammerheadsystems.com or call 650-210-3300.
